

True Enterprise Conferencing

Interwise brings you **ECP Connect - an Enterprise Conferencing solution that delivers unlimited data, video, and voice conferencing to the extended enterprise for a fixed price.** ECP Connect offers True Enterprise Conferencing - Unlimited Conferencing, Unprecedented User Experience, and Unrivaled Savings.

The Benefits of Unlimited Conferencing

ECP Connect includes the broadest functionality on the most scalable platform - creating a combined collaboration and conferencing solution that offers you unlimited business solutions, unlimited web and voice conferencing, and unlimited reach to the customers and partners that make up your extended enterprise.

The Value of an Unprecedented User Experience

What if your employees loved to use your conferencing system? What if they could connect to any important meeting, seminar, or class without having to remember complicated dial-in instructions and event codes? What if they could launch a live collaboration session from their sales portal, CRM system, or project management tool?

The best conferencing system in the world is only successful if people use it. **ECP Connect** makes it so easy to connect and collaborate and ties so seamlessly with other business applications that adoption rates soar.

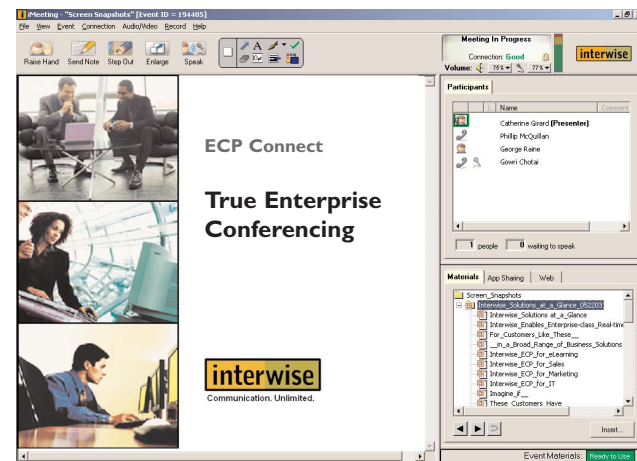

The Power of Unrivaled Savings

Fixed price / unlimited conferencing means the more you use **ECP Connect**, the more you save. No more surprise overage charges or fees to collaborate with external customers and partners. Our Extended Conferencing capability allows you to *own* your own conferencing system and eliminate external conference call service charges.

Combining Conferencing and Collaboration

Effective collaboration requires more than just a conference call or a web meeting. Supporting collaboration needs that range from 1-on-1 meetings to broadcast-to-thousands events, **ECP Connect** offers six types of interactive experiences from one platform and one interface.

- **Meetings** - Launch meetings quickly and easily for sales demos, customer presentations, and ad hoc collaboration - in any situation where you can't (or don't need to) be there in person.
- **Virtual Classroom** - Reach students around the world for facilitated small-group learning, skills training, certification, etc.
- **Web Seminars** - Build awareness, transfer knowledge, and market your programs through large-group presentations.
- **Web Broadcasts** - Reach very large groups of employees, customers, and partners quickly and easily to build understanding of core concepts or simply to communicate more frequently in times of opportunity or challenge.
- **Voice Conferencing** - Fully integrated, all-IP voice conferencing, with user's choice of audio device - voice-over-the-computer, traditional telephone, cell phone, or IP Phone - all in the same event.
- **Record and Reuse** - Capture live meetings or events for those unable to attend, pre-record subject matter experts, create "canned" skills-training modules and presentations that are available anywhere, anytime via internal libraries or public-facing portals.

ECP Connect users benefit from:

- Integrated data, video, and voice conferencing, including user's choice of voice conferencing device
- Comprehensive feature set, including application / document sharing, web tours, shared whiteboard and annotation, and on-demand recordings
- Full eLearning capabilities, including polling, testing, and breakout sessions
- MS Outlook and Lotus Notes integration

Convergence of VoIP and Web Conferencing Could Reduce Teleconferencing Charges by Up to 75%*

Interwise brings you converged VoIP and Web Conferencing with **ECP Connect**, giving you immediate cost savings combined with the easiest migration to VoIP - no need for expensive IP Phones or infrastructure upgrades.

ECP Connect includes Any-Device Conferencing™, bringing the benefits of high-quality voice-over-the-computer without losing the convenience of the telephone. Interwise voice conferencing includes:

- All-IP, integrated voice conferencing - via the computer and/or phone (IP or TDM) in the same event
- On-the-fly transition between audio devices (phone / computer)
- Multiple active speakers and moderator-controlled speaking rights
- Integrated conference recording / editing
